The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMFD), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 1512 nuclectide sequences, appearing as ABX34836-ABX49947, or complements of them. Also included are (i) in a transformed cell having a nucleic acid comprising an LMFD nucleic acid linked to a promoter and a 3' non- translated sequence that functions in the cell to cause termination of transcription and addition of polyadenylated ribonuclectides to a 3' end of the mRNA molecule; and (2) determining a level or pattern of a molecule in a bovine cell or tissue comprising: (a) incubating a marker nucleic acid (comprising any of the subject of the complementary nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid molecule. The LMFD nucleic acid is used for the detection of the molecule. The LMFD nucleic acid is used for detection of the molecule. The LMFD nucleic acid is used for detection of the molecule. The LMFD nucleic acid is used for complementary nucleic acid molecule in a bovine cell or tissue. It is useful for genome mapping, gene identification and analysis, cattle for genetically improving cattle. The present sequence is one of the complementary nucleic acides. The correction but was obtained in pleasing the nucleum of the present sequence as notes the dependent of the nucleum in the specification but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; mouse; xenopus; rat; secreted expressed sequence tag; sEST; strokes desquence tag; EST; probe; chemcicatic; proliferative; immunomodulatory; haematopoietic; chemokinetic; analgesic; haemostatic; thrombolytic; antinflammatory; cytostatic; antibacterial; antifungal; antiviral; antiviral; antibacterial; antifungal; antiviral; antiviral; neuroprotective; notopoian; antipacticic; osteopathic; neuroprotective; notopoian; cerebroprotective; antipaciatic; cerebroprotective; antidepressant; gene therapy; vaccine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             81 AGTATCGTTCCATCTAACAGAGAAGGNCTGCATGAAAGGAGGTGATGGGTTTTTCATCTT 140

AAA41261 to AAA43419 represent specifically claimed secreted expressed sequence tags (BESTS), isolated from human, mouse, xenopus and rat tissue sources. The BESTS can have a range of activities depending on the tissues they were isolated from. The activities include: chemotaciti; proliferative; immunomodulatory; haematopoietic; chemotanic; analgesic; haemostatic; thrombolytic; antiflammatory; cytostatic; antibacterial; antifungal; antivital; antiflammatory; cytostatic; antibacterial; osteopathic; neuroprotective; nootropic; antibachanismian; antipacriatic; cerebroprotective; nootropic; antibackinsonian; antipacriatic; cerebroprotective; and avacines. The sESTS can be used for gene therapy and in vaccines. The sESTS are useful as probes for molecules which correspond to the sESTS. Proteins encoded by the sESTS are useful in assays for determining biological activity and raising antibodies. They may be useful for treatment of autoimmune disorders antibalish and a set of the second and the second antibacterial and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second and second
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (multiple sclerosis, insulin dependent diabetes), allergic conditions (asthma), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers, osteoporosis, osteoarthritis, central nervous system disorders (Alzheimer's, Parkinson's, Huntington's disease, stroke), coagulation disorders (haemophilia, thrombosis), inflammatory disorders (Crohn's disease), tumours, bacterial, fungal or viral infections, depression and psoriasis.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            01-SEP-2000
                                                                                                                               16-AUG-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      23-AUG-2000
       The invention relates to novel genes (ABA11004-ABA21534) and proteins character and conditions e.g. by protein or gene therapy. The genes are medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification.

The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune also ansemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as wycardial isolatemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infections diseases such as viral, bacterial, fungal and parasitic infections Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fip. wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               14557; AGAGGTTTAAATGGGCCTCAAAAAAGTGGCTGCTGCTCCAACAGAGAAAAGCTCTAAAA 14498

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14679-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. CT he mucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and coverian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital, (b) immune of disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, commultiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myccardial ischaemias; (d) wound healing conficus diseases such as wiral, bacterial, fungal and parasitic confections. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/published_pct_sequences

The invention relates to human polymucleotides (AAI79941-AAI93841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to eytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymerial polymerial in other cell populations. The polymerial polymerial in the respiration or which may induce e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activity, inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           97 ACAGAGAAGGNCTGCATGAAAGGAGGTGATGGGTTTTTTCATCTTAGGGATGACAAAAAA 156
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           192 GGAGGAAAGACAAGAAGAAGGTGAAGAAGAAGAAGGAAGCTAGGGCAGTGCAGAAATG 251

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention describes an isolated polynucleotide and polypeptide useful for stimulating and/or expanding T cells specific for a tumour protein for determining the presence of a cancer in a patient. A composition containing the polynucleotide and/or polypeptide is useful for treating a lung cancer in a patient. The polypeptide is useful for removing the polynucleotide sample. The polynucleotide is also useful as probe or primer to detect the level of mRNA encoding a tumour protein. This sequence encodes a lung tumour associated protein or protein. This patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CATGAAATCTCTGTTCGTAGCAAGTGCATGTCTCACAGTTGTCAGTCTGCCACTCCGAG 234

Comprision relates to a polymuciacolide and ung fundur protein, comprising a sequence selected from any of the 14 sequences mentioned in the invention relates to a sequence (S2) mentioned in specification, or a sequence (S2) mentioned in specification, or a sequence consisting of at least 20 contiguous residues of S1, sequences that hybridise to S1, sequences having 75%, preferably CC S1, sequences mentioned in the specification, a sequence (S3) selected from any one of the 4 amino acid sequences mentioned in the specification, a sequence comprising a sequence (S3) selected from any one of the 4 amino acid sequences mentioned in the specification, a sequence comprising the polymucleotide operably linked to an expression vector comprising the polymucleotide operably linked to an expression ocntrol sequence, a host cell transformed or transfected with the vector, an isolated antibody (or its antigen-binding fragment) that expression control sequence, a host cell transformed or transfected with the vector, an isolated antibody (or its antigen-binding fragment) that conditions stimulating and/or expanding T cells with the polymucleotide, protein or antigen-presenting cells that hybridises to S1 under moderately stringent conditions stimulating and/or expanding T cells specific for a tunour processoring colls that madvor expansion of T cells) and inhibiting the presenting cells that express the polymucleotide, protein or antigen or expension and/or expansion of T cells) and inhibiting the expression for stimulateing to the patient an effective amount of the proliferated T cells, and thus inhibiting the development of a cancer in a patient (particularly lung cancer). The protein and oligonucleotide, protein and allo useful in pharmaceutical composition for stimulateing an immune response in a patient. The protein and oligonucleotide is also useful in pharmaceutical compositions, e.g. vaccines the polymucleotide is also useful in pharmaceutical cor primer for nucleic acid hybridisation, and in the design and cor prime The invention relates to a polynucleotide encoding a lung tumour protein.

ACA11514 standard; cDNA; 390 BP.

polynucleotide is useful for isolating a full-length gene from a suitable library. The present sequence is a cDNA (full length, extended or partial) isolated from a library derived from lung tumour/cancer cells. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the

The invention relates to novel compositions and methods for the therapy and diagnosis of cancer, particularly lung cancer. The compositions comprise one or more lung tumour polypeptides, immunogenic portions therof, polynculeotides that encode such polypeptides, antigen presenting cells that express such polypeptides, and T cells that are specific for cells expressing such polypeptides. The novel compositions have cytostatic and immunostimulant activity. The lung tumour antigens can be
                                                                                                                                                                                                                                         ö
                              The invention describes an isolated polynucleotide comprising one of 32 sequences, complement or degenerate variants of them. The polynucleotide is useful for preparing a composition e.g. a vaccine or for gene therapy, for treating or inhibiting development of cancer, e.g. lung cancer. This sequence represents a polynucleotide associated with the compositions and methods for the therapy and diagnosis of lung cancer
                                                                                                                                                                                                                                                                                                               234
                                                                                                                                                                                                                                                                                                                                                    TTAAAGCAGTATCGTTCCATCTAACAGAAGGNCTGCATGAAAGGAGGTGATGGGTTTT 133

The polynucleotides that encode the lung tumour polypeptides can be used in gene therapy to help in the treatment of lung tumours. This polynucleotide sequence represents a human lung tumour DNA clone of the invention. This sequence was not shown in the specification. It has been taken from a World Intellectual Property Organization CD ROM supplied with the specification.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
